

The Bullsheet, a forum for news, humor, and community dialogue, is funded by DCGA, needs their writers to submit something soon... And is printed each day that classes are in session. Submissions must be sent before our editors shamble into the office for next day publication via e-mail to: bullsheet@denison.edu. Submissions herein solely reflect the opinions of the authors.

HOW TO USE CRYSTALS (CORRECTLY)

Finally, the time is here, no longer will you find yourself knee-deep with no sense of direction in the shining beauties that are polished rocks. With this helpful guide, you can overcome the confusing and demanding world that is crystal usage. No need to thank me, but \$10 would suffice.

- 1) Select the correct crystal for your lifestyle
 - a) Listen, there are plenty of crystals out there, you've seen them, all their pretty colors. Never before in your life has there been such an emphasis on the vibes you get from a shiny piece of purple rock.
 - b) But let's go over some basic ones:
 - i) Amethyst - purple. That's all that matters. Goes with everything, make yourself a necklace
 - ii) Citrine - ah the most sophisticated of all the stones. The vibes are royal yet subtle, could be pulled off by both a divorced grandmother of seventeen or a young, up-and-coming mixed-media artist.
 - iii) Onyx - pronounced however you see fit, you little trailblazer you. The feeling of support this one gives you is an illusion. It will lull you into a false sense of security you will never escape.
 - iv) Turquoise - one may guess the color is turquoise but one would be WRONG. You FOOL. The color is a "light sky on a summer's day", or blue, to the most educated circles.
 - v) Jade - this stone is said to be for sensitivity. You could gather them and achieve some peace. Or you could lean over the balcony of the closest skyscraper and pelt them at the people whose tops of heads you don't like. The choice is yours.
- 2) Don't push it, ease into our relationship with your crystals. Give it space, don't be too greedy, and respect its exhausting life. You may introduce your new crystal to your closest family and friends but not over FaceTime. Never over FaceTime.
- 3) When your crystal has adjusted itself well to your environment, you may now begin to heal. Whisper your ailments to the crystal every night before bedtime. The crystal's bedtime.
 - a) Figure out the crystal's bedtime and its working hours. Never force a crystal to work outside its working hours. I cannot stress this enough.
- 4) Sit back, but don't relax, while the crystal ponders your requests. Don't check in on your crystal, it needs to process its feelings (and your feelings) as it navigates the harrowing path that is making you feel just a smidge better.
- 5) Accept the crystal's gifts. It may be a single AI-generated designed sock. It may be a chilled whisper in the wind. In time, you will learn what it means. Do not ignore the crystal's gifts. You will pay for it in time.

AI GENERATED BULLSHEET CONTENT

So, the writers of the sheet are considering going on strike. This is fairly common, as writing satire is one of the most stressful, labor intensive jobs on campus. In preparation for the writers strike, I have prepared a brand new state of the art AI that will generate all the bullsheet content you love at the click of a button. Here's a legit sample of what this AI has to offer from a free AI writing bot I found online.

3 Reasons you're wasting your time getting a degree at a liberal arts college

1. You'll have to pay way too much money.

You've probably heard about how expensive college is, right? Well, you might not know what you're paying for. A lot of people think that they're going to get good grades, do well on tests, and have a great experience while studying for 4 years. But those aren't things that happen automatically. What happens instead is that you spend countless hours doing homework and studying, and then you learn how to study and how to do homework. Then, you end up being surrounded by people who don't understand how hard it is to succeed in college. And when you finally graduate, you feel like you wasted all of that time on something that didn't really help you out. So, you end up having to take out loans to pay back tuition. No matter how smart you are, if you want to graduate without taking out a ton of student loan debt, you should consider going to a vocational school.

2. You won't make friends.

If you go to a liberal arts school, you will definitely meet tons of people. In fact, you might even make some lifelong friendships. But, you won't necessarily find yourself hanging out with anyone after you leave school. There's a big difference between making friends in high school and college. When you're in high school, everyone is still figuring out who they are. Everyone wants to fit in and be accepted. That means that everyone is willing to work together to get along. As soon as you start college, people start competing with each other. People try to prove themselves, and they try to show off their skills. If you want to make friends in college, you need to put in the effort.

3. Your education won't prepare you for the real world.

Here's the thing about liberal arts schools: they teach you how to write papers and how to analyze data. But, those aren't skills that employers actually care about. Employers want people who can communicate clearly and effectively. They want people who can solve problems creatively. They want people who are skilled in critical thinking. Most employers only look at your resume to figure out whether or not you have what it takes to perform certain tasks. Even though you studied literature or history or political science, you might not use any of those skills outside of class. So, instead of learning valuable skills, you're just learning about topics that aren't relevant to the job market.

Ok this sucked. The AI was mean with this one. Writers please don't strike this hurts.
