

The Bullsheet, a forum for news, humor, and community dialogue, is funded by DCGA, recycles, and is printed each day that classes are in session. Submissions must be sent before our editors shamble into the office for next day publication via email to: bullsheet@denison.edu. Submissions herein solely reflect the opinions of the authors.

GRANVILLE'S MOST "THIRSTY" PUBLICATION

Vol. XLV, No. 117

## ***PRANKS I MEANT TO DO YESTERDAY***

Brin Glass,  
hottie

1. Send out a mass email about a fake party
2. Tell my mom and dad I got a presidential medal award to make them proud
3. Pretend to move out of my apartment unannounced
4. Pretend to move into a different apartment unannounced
5. Order my slayer meal under the name "Beyonce"
6. Resign from the Bullsheet
7. Ask my class friend at the beginning of class: "Did you study for the exam?"
8. Dye our milk green

---

***SHOOT IT IS APRIL 3RD NOT  
APRIL 2ND, I EDIT THE DAY  
BEFORE IT IS PUBLISHED  
AND IT ALWAYS MAKES ME A  
LITTLE CONFUSED TO  
WRITE ARTICLES IN A  
TIMELY MANNER***

Brin Glass,  
idiot

# SCIENCE LABS RANKED BY LICKABILITY

William Eddleman  
rocks

Are you a STEM major? Considering it? Just looking to get your lab GE done? Well, I know the amount of lab choices can be overwhelming - and you never know which ones will be fun, and which ones will give you 5+ hours of messing with Microsoft Excel to do every week. But don't worry! You've come to right place. Here all the subjects that offer science labs at Denison ranked on the most important question: can you lick the materials during lab periods?

## 10. Microbiology:

Do not lick things during microbiology labs

## 9. Chemistry:

Call poison control (if you still have a tongue)

## 8. Multicellular Biology:

This will be a disgusting experience at best

## 7. Psychology:

If you do this, you should know you'll probably be the subject of the next lab.

## 6. Data Analytics:

Labs are mostly coding, so you'll just be licking your computer. You do you I guess, but you might want to sanitize it first. Who knows where your hands have been?

## 5. Environmental Science:

Look, a lot of enviro-sci is about things like swamps and ocean water. Draw your own conclusions about how this would taste.

## 4. Robotics:

Not really dangerous, but lab class is a very unromantic setting. Take the robot out on a nice date first.

## 3. Astronomy:

Licking telescope lenses will smudge them, which nobody appreciates. However, maybe you'll get to lick a moonrock or meteorite fragment. How cool would that be?

## 2. Physics:

Probably won't do anything. You can't really lick the concept of gravity or velocity or whatever. However, if it's electric physics, this is a quick and easy way to test batteries!

## 1. Geology:

Licking things is a shockingly effective way to identify rocks and minerals, and is sometimes encouraged by profs! Earth science/geology labs are perfect for getting to safely and productively lick the science materials.

### Staff "Minerals" Box
